

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

PROFESSIONAL SUMMARY

- Motivated electrical engineer with demonstrated abilities to innovate, think critically and solve problems, employed during the nine years of work experience acquired.
- An accomplished MASc. student in Electrical Engineering from University of Windsor with a solid educational foundation and applied experience in Embedded System Design, VLSI Design, Web Development, and Software Development Life Cycle (SDLC).
- Strong communication and presentation skills employed as well as demonstrated through oral and poster presentations delivered at several conferences.
- Teamwork and professionalism skills developed and applied as part of volunteering experience while working with multiple non-profit organizations for various causes.
- Teaching experience and time management skills applied as a graduate assistant while simultaneously working on research assistant role, proposal and defense seminars and thesis.
- Lifelong learner with a passion to learn exemplified by learning interests and good skills in Mathematics/Science since high school.

TECHNICAL SKILLS

- **Programming Languages:** C/C++, Java, GoLang
- **Cloud Platforms:** Azure DevOps
- **Embedded Development:** Embedded C, Vector Tools: Canoe 11, CANdelaStudio, DaVinci Developer, DaVinci Configurator, BusMaster, Renesas Flash Programmer
- **Web Development:** MySQL, HTML, JavaScript, CSS, PHP, JQuery, React, Redux, Bootstrap, Databases framework, Node.js, Typescript, Next.js, JSON, XML, REST
- **Scripting Languages:** csh, bash, Tcl/Tk, Python, Perl, SQL
- **Design Tools:** MATLAB, ModelSim/Questasim, OpenLane/OpenROAD, Design Compiler, Quartus Prime, Cadence Tools: Modus, Genus, Innovus, Xcelium, Pspice, Virtuoso, Arduino, Bazel
- **IDE:** Eclipse, Arduino, Sublime Text, Vim, Visual Studio, Visual Studio Code, Quartus Prime, Vivado, Xilinx ISE, Xcode, Turbo C++, AVR Studio, MULTI IDE (Green Hills Software)
- **GNU Development Tools:** gcc, gdb, bison, make, Octave
- **Hardware Description Languages:** Verilog, VHDL
- **Hardware Design Flows:** FPGA, ASIC
- **OS:** Linux (Ubuntu, RHEL, CentOS, SLES, LOP), Windows 11/10/8, MacOS
- **Version Control:** CVS, git, SVN
- **Software Applications:** MS Office (Word, Excel, PowerPoint, Outlook), Libre Office suite, Google Docs, Adobe Illustrator, Inkscape, Zoom, Teams
- **ML Frameworks:** Tensorflow, Jupyter notebooks, oneAPI AI Analytics Toolkit

EDUCATION

Master of Applied Science, Electrical Engineering,
University of Windsor, Windsor ON

Sep 2020 – Dec 2022

- Thesis title: Design Space Exploration of the physical design of 12nm AI processor

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- Tools used: OpenLane, Genus, Design Compiler for synthesis and PnR of picorv32 CPU and CSI 4X Lane

Bachelor of Technology, Electronics and Communication Engineering,

Jul 2011 – May 2015

Jamia Millia Islamia, Delhi, India

- Major project: Triple Port RAM implemented and synthesized on Xilinx Spartan-3E
- Tools used: ModelSim and Xilinx ISE for compilation, syntheses and PnR of Verilog written for Triple Port RAM

WORK EXPERIENCE

Tutor (Independent Contractor), Varsity Tutors — Remote (Canada)

2023 – Present

- Deliver personalized online tutoring sessions to high school and postsecondary students through the Varsity Tutors platform.
- Assess learners' strengths, challenges, and goals to design and implement tailored instructional plans that foster academic improvement.
- Provide focused support in mathematics and science subjects, emphasizing conceptual understanding, problem-solving, and critical thinking.
- Utilize digital learning tools, diagnostic assessments, and interactive exercises to maintain student engagement and track progress.
- Demonstrate professionalism, adaptability, and effective communication in a remote learning environment, ensuring confidentiality and compliance with platform standards.

Graduate Assistant, University of Windsor, Windsor ON

May 2021 – Dec 2022

The University of Windsor (UWindsor) is an industry-leading institution that bridges local engagement with global connectivity, offering academic pursuits to over 16,000 students across various comprehensive programs.

- Duties involved:
 - Lead TA for ELEC-4430 and ELEC-3300 courses
 - TA-Grader for GENG-8010
 - Marking exams/assignments,
 - Leading weekly lab sessions and weekly office hours
 - Doing project demonstrations
- Ensured all midterms, finals, and assignments were evaluated for class of 50+ students with a detail-oriented and consistent marking while communicating genuine and apt feedback, prioritizing student interest.
- Led weekly lab sessions and 80+ weekly office hours which included creating lab assignments, asking oral questions, answering student queries, verifying student reports, and checking student implementations for correctness resulting in above 80% student grade average.

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- Motivated students by asking relevant and thought-provoking questions as part of lab project assessments and pointing them to answers/solutions during the test to brush up their learning and recall capability of the subject-matter leveraging the idea of test/assessment as a form of enhanced learning.
- Excellent presentation skills exhibited while demonstrating projects to students resulting in 90% of groups completing the project successfully.
- Implemented a VHDL assignment design of a 8-bit CPU including the data-path and the ALU as part of ELEC-8600 Reconfigurable Computing.
- Designed and implemented several labs including Multiplier ASM, 4-byte processor, Fibonacci Number Generator, for the Intel DE-10 Lite FPGA as part of the ELEC-4430: Embedded System Design and ELEC-3300 Digital Logic Design II BASc. courses.

Thrift Store Manager, ACRT, Windsor ON

Jan 2023 – Present

ACRT was envisioned in 2000 through the work of Lizzy Walker and aimed to address communities living with HIV/AIDS and those negatively impacted by the virus. Travelling to Africa, ACRT began working with local groups and individuals, returning yearly with medical supplies, nutritional supplements, and donations to help people suffering from HIV/AIDS and other poverty related diseases.

- Duties Involved:
 - Greeting and welcoming customers
 - Identify prices of items and tabulate total payment required using cash register.
 - Receive and process payments by cash.
 - Wrap or place merchandise in bags.
 - Calculate total payments received at end of work shift and reconcile with total sales.
 - Rotate merchandise and displays to feature new products.
 - Cleaning and maintaining the thrift store.
- Collaborated with ACRT management to do marketing for the store and improve its visibility by brainstorming and suggesting ideas for social and physical marketing which led to improved sales.
- Trained new volunteers and new hires with the tools to run the thrift store which led to new hires being able to self-sufficiently manage the thrift store without any help.

Software Engineer, Ethica Channel Enablement, Toronto, ON, Canada

Feb 2025 – Jul 2025

With bonded last-mile connectivity, session-proof failover, and powerful network analytics, Ethica Channel Enablement's SDWAN solution (CloudAccess) helps Internet Service Providers (ISPs) deliver uptime.

- Duties Involved:
 - Design, develop, and maintain software applications using C/C++, Go, and Python.
 - Collaborate with cross-functional teams to define, design, and ship new features.
 - Ensure the performance, quality, and responsiveness of applications.
 - Troubleshoot, debug, and optimize code to improve performance and scalability.

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- Stay current with industry trends and technologies to bring fresh ideas to the team.
- Participate in code reviews and provide constructive feedback to team members.
- Work closely with product managers, QA, and other engineers to deliver high-quality software.
-
- Designed and Developed the Auto-Configuration application in GoLang aimed at automatically setting the device's bonding parameters including Bonding Algorithm, Reorder Buffer Time Value and Path MTU based on a series of network tests using the grid-search algorithm.
- Performed the complete process of Software Development Life Cycle including Planning, Documentation, Requirement Analysis, Designing, Developing, Testing and Deploying the Auto-Configuration application which involved creating Product BackLog Items (ADO tickets) for appropriate features, committing code using git version control and creating pull requests as well as creating unit testcases to achieve 100% test coverage using go testcover.
- Job Description: https://www.linkedin.com/jobs/view/4119838569/?refId=7775119f-dd18-4712-bab1-86a0f17b401f&trackingId=L3kDAa60QMakbXnrJ7xy3Q%3D%3D&trk=flagship3_job_home_appliedjobs

Embedded Software Developer, Apag CoSyst, Windsor, ON, Canada

Oct 2023 – Oct 2024

Does both design work and production with focus on quality-conscious and demanding automotive brands such as Audi, BMW, VW, Mercedes-Benz, Lamborghini, Rolls-Royce, Bentley, Ford, Jeep, and Cadillac with primary product types including Electronic control units (ECUs) driving smart sensors, smart actors or human machine interfaces (HMI), and smart lighting for comfort and driver assistance functions; and LED units for exterior and interior design and peripheral function lighting. Beyond automotive, also focuses on quality-conscious medical and industrial customers with services including providing design, development, industrial engineering and electronic manufacturing services.

- Duties Involved:
 - 1. Main tasks
 - a. Achieving project objectives concerning quality, costs, and schedule
 - b. Discussing technical details of the project with the customer.
 - c. Analysing customer requirements
 - d. Reviewing requirements analysis during the different phases of the software development process
 - e. Ensuring the traceability
 - f. Designing software drivers and software modules
 - g. Ensuring technical documentation of the SW
 - h. Implementing low level drivers and software modules
 - i. Configuring software modules
 - j. Performing developer tests
 - k. Supporting the specification and verification of Testcases for system testing

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323

mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- l. Specification and execution of unit, module, and integration testing
- m. Troubleshooting the software
- n. Reviewing and improving validation and verification test plans
- 2. Other tasks
 - a. Administrative tasks
 - i. Record/track times
 - ii. Support of the continuous improvement process (CIP) in terms of development methodology
 - (ASPICE), project management, utilised tools and technologies, training, etc.
 - b. General duties
 - i. Willing to travel to the customer
 - ii. Following: rules related to workplace health and safety, ESD guidelines, protection of company property
 - iii. Committing to: working hours, shift schedule, and breaks defined by the supervisor
 - iv. Treating company materials, products, and other property with due diligence and care
 - v. Committing to the training programs required to fulfill the functions of this role
 - vi. Performing tasks required by the integrated quality and environmental management systems; cooperating to protect the environment (e.g., sorting and recycling waste); reporting environmental accidents immediately
 - vii. Performing all other duties as assigned by your supervisor
- Analyzed and reviewed customer change request requirements to implement the required changes in the software modules consisting of more than ten thousand lines within two days of being assigned the Jira ticket.
- Performed developer tests to ensure correct functionally correct implementation in minimum number of code lines with relevant comments for easy understanding.
- Analyzed and reviewed customer software requirements to implement software features in an AutoSAR (Classic) module following Agile methodology and A-SPICE standards, and created developer test reports which consisted of software testcases and unit tests to ensure correct functionality in minimum number of code lines with relevant comments for easy understanding.
- Improved existing implementation of Busmaster script meant for driving Ambient Lighting Module (ALM) ECUs, ten folds, by implementing a single script capable of driving multi-node multi-channel ALMs parallelly through a single Busmaster window compared to existing implementation requiring ten variants of the same script and multiple busmaster software instances to operate multi-channel multi-node (bus-topology) ALM configuration.
- Analyzed and performed root cause analysis of Polyspace MISRA C:2012 violations and software defects to provide robust software solutions for an Ambient Lighting module project.
- Created a single busmaster C script that enabled multi-node multi-cluster simulation of Ambient Lighting Modules in a bus topology. Previously developed scripts required multiple instances of

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

the same script each with a separate diagnostic ID to enable multi-node simulation and it required multiple busmaster instances for enabling multi-cluster simulation. This reduced time, money and software effort by about 50%.

- Meticulously worked on fixing Polyspace static analysis bugs while completing assigned bug tickets on Jira and fixed all bugs assigned. Went above and beyond assigned responsibility and reran Polyspace to fix assigned bugs. Opened review tickets on Fisheye and crucible and got the code reviewed by senior developer.

Product Validation Engineer, Cadence Design Systems, Noida, India

Jul 2015 – Apr 2021

Cadence is a market leader in AI and digital twins, pioneering the application of computational software to accelerate innovation in the engineering design of silicon to systems.

- DFT scan insertion and ATPG pattern generation using automation through scripting for several large designs from companies including TI, IBM, GF, and TSMC with millions of gates and flops as part of my task for feature testing.
- Managed Regression Analysis task, as part of product validation engineer role: Applied scripting and Web development skills to automate tasks and improve the productivity of the team which was apparent by the turn-around time of the task (improved from a week to two days). Further, collaborated with team members to better the infrastructure promptly, based on feedback.
- Specifically, designed & did front-end development as well as back-end development for msgid-based webpages that helped gather vital statistics on a suite of around 10,000 testcases enabling easier maintenance and faster turn-around time.
- Designed and developed testcases for MODUS and GENUS software to enhance coverage and test new features in a Makefile-based environment using c-shell on RHEL operating system and, maintained a suite of 2,000+ testcases utilizing automation.

Research Assistant, Mitacs - Aarish Technologies – University of Windsor
– Sep 2022

Oct 2021

Aarish Technology is the world's leading developer of high-performance, low-power and low-cost Artificial Intelligence (AI) accelerators, established in 2018 by founding members from Silicon Valley and the growing artificial intelligence hub of Montreal, Canada.

- Duties involved:
 - Performing placement and routing of the physical design of a 12nm low-power hardware accelerator AI ASIC chip utilizing Convolutional Neural Networks (used for object detection)
 - Generating and Selecting memories using Global Foundry memory compilers
 - Placement of memory macros using Cadence Innovus tool and running PNR flow.
 - Running placement-driven synthesis flow using the generated .def file on the Cadence Genus tool.

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- Wrote top-level RTL for the ASIC design instantiating modules for generating the pinout of the FPGA-based design.
- Wrote memory wrapper RTL for instantiating different memories generated by the memory compilers.
- Applied Linux command-line skills (converted pdf and extracted text for identifying port-connections to enable faster generation of FPGA pinout) and scripting skills in
 - Csh: Memory configuration generation using memory compilers and a wrapper script that could help customize selection of technology(GF12LP/GF12), memory compiler (RF/SRAM), memory configurations(Depth+Width), Output and input directory selection.
 - Tcl/Tk: Relative Placement methodology-based script for memory-macro placement
 - Perl: Auto-generation of excel file containing data comparing various placements each consisting of attributes such as Timing (WNS, TNS), Area, Utilization, Power, Images for memory-macro placements, and
 - Python: Memory-macro cell count information to speed up the turn-around time of simple tasks improving self and team productivity.
- Developed script in csh to automate the process of generating a set of Register File/SRAM memory configurations using GlobalFoundries memory compilers making it faster and easy to generate as compared to using the memory compilers alone.
- Created a relative-placement methodology-based script that improved memory macro placement turn-around time from 2-3 weeks to 3-4 days which further led to a reduction in design space exploration time taking a maximum of 2 months.
- Applied time management, teamwork, and communication skills while working remotely in a team to deliver tasks timely, while simultaneously working on other roles like graduate assistantship, proposal, and defense seminars, and writing Thesis.

Trainee, Air India Ltd., Delhi, India

May 2013 – Jun 2013

Air India is the flag carrier of India with its main hub at Indira Gandhi International Airport in Delhi, and secondary hubs at Kempegowda International Airport in Bengaluru and Chhatrapati Shivaji Maharaj International Airport in Mumbai, alongside several focus cities across India. Headquartered in Gurugram, Haryana, India, the airline is owned by Air India Limited, which is owned by the Tata Group (74.9%) and Singapore Airlines (25.1%).

- Industrial training in Electric, Instrumentation, and Radio shops
- Learned about various aircraft parts and their working.

Trainee, DKOP Labs Pvt. Ltd., Noida, UP, India

Jun 2014 – Jul 2014

DKOP Labs Pvt. Ltd. (Earlier DesignKOP Labs) is a Research and Training company in VLSI Design, Embedded Systems & Software Development. It is founded by a team of highly experienced and qualified Semiconductor & EDA Industry Professionals. DKOP Labs Finishing School, the Training

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

Division, conducts various industrial training programs in VLSI Design, Embedded Technology & Software Development.

- Six weeks summer training in VLSI Design for subjects including Digital Design, Verilog, System Verilog (including Assertion based Verification), Tcl/Tk, Bash, and FPGA flow.
- Implemented and synthesized Triple Port RAM on Xilinx Spartan-3E FPGA board.
- As part of System Verilog project, performed ASIC verification of a DUT consisting of execute pre-processor and an ALU using its system-spec by creating a layered and object-oriented testbench. Used Questa features for finding functional coverage for the same testbench.
- Implemented Minesweeper game in Tcl/Tk using Wish.
- Learned linux command line features and the Bash shell

Trainee, Ashok Leyland Ltd., Uttarakhand, India

May 2012 – Jun 2012

Ashok Leyland vehicles have built a reputation for reliability and ruggedness. The 5,00,000 vehicles we have put on the roads have considerably eased the additional pressure placed on road transportation in independent India.

- Industrial training at the Cab weld shop
- Learned about various PLC and related robotic arms, cab welding machines, and instruments.

VOLUNTEERING EXPERIENCE:

Volunteer, Cadence Design Systems

- As part of Cadence Noida CSR activity on “School Building-Construction, Painting and plantation” for Vidya and Child (at Vatika Center, Shahpur Village, Sector 128, Noida), I painted school walls, school desks, school boundary walls, and tables and took part in tree plantation drive while working in a team to complete the task at hand in a limited time. Dec 2016
- Cadence Noida partnered with Rise Against Hunger to pack 80,000 nutritional meals as part of a global campaign, where, as one of the volunteers, organized the event along with others, and took part in packing 5000+ meals in a team effort adhering to a time limit while demonstrating time management, organizational and teamwork skills. As an individual who took part in packing these meals, I made a difference in the life of malnourished and unprivileged communities across India. Apr 2019
- As part of Cadence Noida CSR, I volunteered for repainting the walls of the non-profit DESIRE SOCIETY - Caring for HIV/AIDS children in India while managing time working on my job at Cadence. Jan 2020

Volunteer, University of Windsor

- **VIP-CSL – ACRT International:**
As part of the University of Windsor’s VIP-CSL (Volunteering Internship Program – Community Service Learning) program, I volunteered at ACRT International where I utilized my time

management skills, collaboration skills, professionalism, and quick learning ability to research and develop project proposals, take part in team brainstorming sessions for organizational activities, and efficiently manage and run thrift store. May 2022 – Dec 2022

- **IEEE Xtreme 16.0:**

As part of IEEE Xtreme programming competition, I volunteered as an ambassador and took part in Micro Volunteering Program Tasks as part of the ambassador program. These micro-volunteering tasks involved: self-introduction, volunteer referral, attending webinar trainings, tagline suggestions for the competition, physical and social marketing to spread awareness about the competition, promoting IEEE Xtreme on social media platforms, participating team referrals and organizing the IEEE Xtreme programming competition physically. Jul 2022 – Oct 2022

CONFERENCES:

- Poster presentation on "[Hierarchy of Binary Classifiers for multiclass-classification](#)" at a conference titled "[From Earth to Space](#)". ([Link to Poster](#)) Jun 2022
- Oral presentation on "[Relative Macro Placement for faster physical design process](#)" at "[Metric 2022](#)" conference organized by McMaster University in Hamilton, Ontario, Canada Oct 2022
- Poster presentation on "[Design Space Exploration in the Physical-Design of an AI-Processor at 12 nm using Relative-Placement Methodology](#)" at "[MWSCAS 2023](#)" in Phoenix, Arizona, USA Aug 2023

PROJECTS:

- Designed a Triple Port RAM on Verilog and synthesized and implemented the design on Xilinx Spartan 3E FPGA kit. (Project Link on GitHub: [Triple Port RAM](#))
- Designed and developed an FPGA project on Fibonacci Number Generator for ELEC-4430 lab. ([Link](#))
- My implementation of the nand2tetris computer was put together as part of the following courses: "From Nand to Tetris / Part I" and "From Nand to Tetris / Part II" (GitHub repository Link: [Link](#))
- Made a tool on Hypergraph Partitioning based on KL algorithm in C++ as part of programming assignment in ELEC-8590 Physical Design Automation course taught in Winter 2021. (Project Link on GitHub: [Link](#))
- Designed a tool on single layer maze router based on Lee-Moore maze router algorithm in C++ as part of programming assignment in ELEC-8590 Physical Design Automation course taught in Winter 2021* (Project Link on GitHub: [Link](#))
- Created a Boolean Calculator Engine in C++ based on the idea of Unate Recursive Paradigm using PCN cubelist data structure in the Computation Boolean Algebra domain as part of assignment for Coursera course: VLSI CAD Part I: Logic. ([Link](#))
- Made a program on "Car Service billing software" in C++
- Part of the top-10 teams who competed at the e-Yantra Robotics competition organized by IIT Bombay, India for programming the Firebird V Robotic kit for Cargo sorting task ([Project video link](#), Github: [Link](#))

MOHIT SHARMA

Kitchener, Ontario, N2P 2W9 | +1 (226) 759-8323
mohit12562@gmail.com | [github/12562](https://github.com/12562) | [linkedin/mohit12562](https://www.linkedin.com/in/mohit12562)

- Designed and developed a “Whack-a-Mole” game as the final Arduino-based project for ELEC-4430 laboratory. ([Project Video link](#))
- Finalist at RoboCon competition, for building and competing using a line follower based on Arduino, held at IIIT Delhi, India.
- Made simple mini-project games (like stopwatch, Pong-game, Blackjack, Spaceship, and Rice Rocks) as part of mini projects for Coursera course: “An Introduction to Interactive Programming in Python”.
- Built a Mock Co-win chatbot in Python as part of MOOC: Software Foundation Course (part I) through the eYRDC. Also, developed a video explaining the functionality of the chatbot (Video Link: [Link](#))
- Minesweeper game developed using Tcl/Tk ([Repository Link](#))
- Created a program to play Rock, Paper, Scissors and win at least 60% time against four different bots. (Project Link: [Link](#))
- Used Tensorflow and Keras to create a CNN model to correctly classify images of dogs and cats with at least 63% accuracy (Project Link: [Link](#))
- Created a book recommendation algorithm using K-Nearest Neighbors (Project Link: [Link](#))
- Created a regression model to predict healthcare costs based on a given dataset (Project Link: [Link](#))
- Created a machine learning model that will classify SMS messages as either "ham" or "spam". A "ham" message is a normal message sent by a friend. A "spam" message is an advertisement, or a message sent by a company. (Project Link: [Link](#))
- As part of the course Introductory Physics I with Laboratory developed a video studying the constant velocity motion. (Video Link: [Link](#))

AWARDS AND PUBLICATIONS

- Selected for Country/Region/Territory Recognition for Canada at Intel® AI Global Impact Festival 2022 in the Impact Creators for the 18+ Years age group for the project: Binary classifiers for multiclass classification
- Ranked third for the outstanding contribution in the IEEE Windsor CIS/SMC Deep Learning Challenge – 2021
- Best Student Poster Award as part of Student Research Forum in the area of Digital, Communications, and Signal Processing Circuits for the poster presentation entitled “Design Space Exploration in the Physical-Design of an AI-Processor at 12nm using Relative-Placement Methodology” organized during MWSCAS 2023, Phoenix, Arizona
